

IT 521 Proseminar I: Instructional Technology as a Profession
Week 8 Breakout Room Activity
Last updated October 7, 2015

For this breakout activity, you will work in your assigned teams for the Usability Testing of a Web Authoring Tool. As a team you will share with each other the websites you created with WordPress and WIX. While one participant is sharing his/her site, other team members need to take note of techniques they did not know how to do themselves and ask the person sharing to show what s/he did. If there are any lingering issues about Google Site from the week before you can discuss that as well. The instructor will provide moderator rights to one member of each team and that person can give other individuals moderator rights as necessary. After you have discussed issues about specific tools review the Master's Professional Portfolio Prototype and Showcase assignment and identify in your teams any issues that need clarification to ask the instructor.

By the end of the breakout session your team needs to be prepared to share to the whole class:

1. A minimum of 3 features in WordPress that you learned this week;
2. A minimum of 3 features in WIX that you learned this week; and
3. Share questions about the Master's Professional Portfolio Prototype and Showcase assignment.

You will have 40 minutes to complete this activity; thus, you will have to be efficient and use your time wisely. It may be a good idea to set the agenda first and decide on a designated note taker and timekeeper.
